DNF

Canonical name	DNF
Date of creation	2013-03-22 14:14:08
Last modified on	2013-03-22 14:14:08
Owner	rspuzio (6075)
Last modified by	rspuzio (6075)
Numerical id	4
Author	rspuzio (6075)
Entry type	Definition
Classification	msc 03B05
Synonym	disjunctive normal form
Related topic	CNF
Related topic	AtomicFormula

A propositional formula is a DNF formula, meaning Disjunctive Normal Form, if it is a disjunction of conjunctions of literals (a literal is a propositional variable or its negation). Hence, a DNF is a formula of the form: $K_1 \vee K_2 \vee \ldots \vee K_n$, where each K_i is of the form $l_{i1} \wedge l_{i2} \wedge \ldots \wedge l_{im}$ for literals l_{ij} and some m which can vary for each K_i.

Example: $(x \wedge y \wedge \neg z) \vee (y \wedge \neg w \wedge \neg u) \vee (x \wedge v)$.
